

Frederick Stoney

fredstoney22@gmail.com | 703-980-1349 | Arlington, VA

BACKGROUND

Analytical and impact-driven Senior Full Stack Engineer with 5 years of experience architecting cloud-scale systems across AWS and GCP. Proven track record of merging a deep mathematical and statistical background with robust software design to drive algorithmic optimization, scale data-driven solutions, and bring significant revenue growth. Adept at leading cross-functional initiatives and translating complex business requirements into high-performance technical solutions.

TOOLS

Working Experience: JavaScript/TypeScript, React, Redux, NextJS, Svelte, Storybook, Go, Python, FastAPI, Flask, Microservices, REST, GraphQL, Docker, Gitlab CI/CD, Datadog, AWS, GCP, AWS CDK, Terraform, Spacelift, SQL, BigQuery, Firestore, Snowflake, Redis, Kafka, Airflow, AWS Sagemaker, Cursor AI

EXPERIENCE

Eventbrite, (Remote) - Software Engineer II, Ads

April 2024 - April 2026

- Spearheaded the design and execution of a new real-time ad auction algorithm after identifying budget spending inefficiencies via statistical trend analysis; validated via Statsig A/B testing to drive +\$300K/year in incremental revenue while reducing advertiser ad impression costs by 20%.
- Engineered a machine learning pipeline for time series Prophet Models using AWS SageMaker to predict traffic for millions of daily auctions, reducing variance in ad performance.
- Architected and deployed a Next.js web application and Backend-for-Frontend (BFF) service for high-traffic search pages using AWS CDK, decoupling from legacy systems and improving page performance

Freelancing - Full Stack Software Engineer

Feb 2023 - April 2024

Developed full stack web solutions for multiple clients.

Healthlab - Created healthcare patient data pipelines with real time display.

- Developed Python/Flask API endpoints to manage scheduling workflows, syncing availability and events across Outlook and Google Calendar.

Clean Rooms West - Sensor management platform for clean rooms.

- Created a sensor data dashboard with TypeScript/React, Node.js, and AWS Amplify, enabling real-time data visualization and automated alert notifications for clients.

Task.it - Engineered web-based scheduling and task management solutions with GCP (<https://task.it>).

- Integrated with LLMs and Twilio to convert user text input into structured JSON, and automate task creation.

Fountain Life, (Remote)

June 2021- Feb 2023

Full Stack Software Engineer

Early startup, accessible Patient medical journey system with GCP

- Bridged technical and non-technical teams as the technical representative at sprint planning meetings and as the primary contact for feature requests, bug reports, and questions about the system.
- Improved and maintained Python backend microservices, covering patient data, appointment setting, Stripe payments, signing documents electronically, sending out notifications, and telehealth meetings.
- Architected a location selection google maps application utilizing a Go data retrieval layer and BigQuery database schema to bring location and pricing options to patients.

EDUCATION

University of Virginia, School of Engineering, Charlottesville Virginia

May 2021

Masters of Computer Science

GPA: 3.9/4.0

Honors: Computer Science Academic Excellence Fellowship

University of Virginia, College of Arts and Sciences, Charlottesville Virginia

May 2020

Bachelors in Computer Science and Statistics

Minor in Economics

GPA: 3.8/4.0

Honors: Echols Scholar
